Re: VP Racing Fuel, IMSA 100 E10

This is a reminder to all teams that VP Racing Fuel, IMSA 100 E10, the Official Fuel for IMSA, contains a maximum of 10% Ethanol. Standard operating procedures for fuels with Ethanol mixes would include draining the fuel cell when not in use and regular inspections. Each team should check with your fuel cell and any fuel component suppliers about any additional maintenance that would need to be done while using Ethanol as an additive in the fuel.
